Senior DevOps Engineer | AWS | Azure | Kubernetes | Terraform | CI/CD

Summary

Cloud and DevOps Engineer with 5+ years of experience designing, automating, and supporting reliable infrastructure across AWS, Azure, Kubernetes, and virtualized environments. Strong background in Terraform, CI/CD automation, GitHub Actions, Docker, Kubernetes, ECS, Linux administration, monitoring, and infrastructure documentation. Proven ability to improve deployment consistency, reduce cloud waste, strengthen reliability, and support scalable production environments.

Skills

AWS, Azure, GCP, Terraform, Kubernetes, Docker, CI/CD, GitHub Actions, Azure DevOps, Linux, Argo CD, Helm, ECS, EC2, ALB, Auto Scaling, CloudWatch, Prometheus, Grafana, Infrastructure as Code (IaC), GitOps, Site Reliability Engineering (SRE), Infrastructure Automation, Cloud Security, Monitoring & Observability, Packer, Ansible, Cloud Cost Optimization

Experience

Senior DevOps Cloud Engineer

Vibes Meet LLC | Remote | Mar 2025 – May 2026

- Designed and deployed production AWS infrastructure using Terraform, including EC2, Application Load Balancers, Auto Scaling Groups, and CloudWatch monitoring.
- Implemented immutable deployment pipelines using GitHub Actions, Packer, Ansible, and Terraform, reducing configuration drift and improving release consistency.
- Reduced cloud infrastructure costs by approximately 40% through EC2 rightsizing, unused resource cleanup, and improved infrastructure governance.
- Created reusable Terraform modules, architecture documentation, and operational runbooks to improve maintainability and team onboarding.
- Supported production infrastructure reliability through monitoring, troubleshooting, and repeatable deployment workflows.

Site Reliability & DevOps Engineer

Qore Inc | Oct 2019 – Apr 2024

- Implemented GitOps based microservices deployments to Azure Kubernetes Service using Argo CD and Helm Charts, reducing manual release effort.
- Managed container image publishing to Azure Container Registry and automated version updates with Argo CD Image Updater.
- Built Prometheus and Grafana dashboards to improve visibility into service health, performance, and availability.
- Drove release orchestration across multiple environments using Bitbucket, Azure DevOps, and Octopus Deploy.
- Improved deployment reliability by standardizing delivery workflows and strengthening Kubernetes release processes.

Projects

Automated Infrastructure on AWS

Terraform, AWS, EC2, Auto Scaling, ALB, CloudWatch

- Built production-style AWS infrastructure using Terraform, including EC2 instances, Auto Scaling Groups, Application Load Balancer, and environment-based configuration.
- Designed infrastructure for scalability, high availability, and cleaner deployments across environments.
- Improved operational visibility through monitoring setup and infrastructure documentation.

Immutable Deployment Pipeline

GitHub Actions, Packer, Ansible, Terraform, AWS

- Built an immutable deployment workflow where GitHub Actions triggered Packer to create AMIs and Terraform deployed updated infrastructure.
- Reduced manual server changes and configuration drift through standardized image-based deployments.
- Improved release consistency and infrastructure reliability through automation and repeatable deployment patterns.

AWS Student Chatbot Platform

AWS Amplify, Cognito, Lex, Bedrock, Lambda, DynamoDB, S3

- Built a cloud-native student support chatbot using AWS managed services for authentication, conversational AI, serverless logic, and data storage.
- Integrated Cognito, Lex, Bedrock Knowledge Base, Lambda, and DynamoDB to support secure user access and intelligent question handling.
- Designed the solution to demonstrate secure cloud architecture and scalable managed-services integration.

Certifications

- Google Associate Cloud Engineer
- AWS Certified Solutions Architect – Associate
- Microsoft Certified: Azure Administrator Associate
- Google Cloud Digital Leader
- Microsoft Certified: Azure Fundamentals
- Microsoft 365 Certified: Fundamentals

Education

Cloud Computing Technologies — George Brown College, 2024–2025

Bachelor of Science in Computer Science — Madonna University, 2015–2019
